HY-PURE

Aims to save Global environment
through Wet Garbage
disposal management.

HY-PURE
PRODUCTS PVT. LTD.

At Hy-Pure, we are passionate about improving the environment with innovative products.

HY-PURE started in the year August 2019 by Mr. Shakil Ahmed, Mr. Vishwas Umarani and Mr. Nagnath Pawar with the vision to serve the industry with unique products for providing a sustainable solution to Oil contamination for Hydraulic Oil, Turbine Oil, Lube Oil, and Transformer Oil. Our Oil Asset product line is designed to extend the life of hydraulic, gear, turbine, and transformer oils by up to ten times, resulting in significant cost savings for our heavy industry clients.

We have now moved on to work in line with 'Swachh Bharat Abhiyan'. Our Waste Reduction product line includes the 'Wet Garbage Processing Unit'. This is a game-changing solution that liquidizes food waste. The output is just like sewage water. We are fully committed to sustainability and eco-friendly solutions, which makes us the top choice for cost-effective and environmentally responsible solutions.

Our product is designed and developed by experts to handle some of the toughest standards of leading institutions in India, as this product is made for Indians by Indians. This product is made for improving the environment and make our lives pollution free and healthy.

Vision: To save Global environment through Wet Garbage disposal management.

Mission: Focus on improving performance through continuous research and development.

From the Director's Desk

Mr. Vishwas Umarani

Director

Marketing

The problem of food waste in India is huge. With the increasing population, the amount of food waste generated every day is bound to increase. The number of landfills is growing and disposing wet waste on dumping grounds needs to STOP. There has to be a solution to stop the heaps of wet garbage piling up, as this releases methane gas and also spreads diseases.

Considering the impact of present disposing methods over future and its significant impact on health and environment we decided to launch '**Wet Garbage Processing Unit**' - **A product meant for processing of Kitchen waste Veg/Non-veg (with bones) that is produced daily in our kitchen in a clean and hassle free manner.**

Mr. Shakil Ahmed
Director
Technical

To be a research and result oriented company with a dedicated team of professionals using frontline technology to manufacture machines of the highest quality not only in India but in the World.

Mr. Nagnath Pawar
Director
Manufacturing & Services

With the strategies for achieving greater efficiency and productivity along with advanced technologies automation in manufacturing, we started with Oil Purification machines and moved further to manufacture Wet Garbage Processing unit – a cost effective and automatic wet garbage disposal machine which is an innovative solution to improve the environment.

HY-PURE
PRODUCTS PVT. LTD.

Wet garbage is a major environmental issue and needs to be addressed. Our unit is designed to quickly and efficiently process wet garbage, reducing the waste produced instantly. This offers a solution that not only reduces waste but also generates organic fertilizer and creates energy. No more smelly, overflowing landfills - now you can keep your landfill clean, safe, and odor-free.

It is efficient, cost-effective, and sustainable, making it the perfect solution for any home, restaurants, hotels or organizations looking to reduce their environmental footprints. Our customers have been exceptionally satisfied with our product.

Word from Team Hy-pure- Use of latest technology coupled with a highly dedicated & motivated professional team to reach our goal of manufacturing. Our team of experts are dedicated to providing the best service and highest quality products possible.

Wet Garbage Management – A Challenge

- ◆ Kitchen waste- Also known as organic waste.
- ◆ Disposing it has become a major issue in many communities and cities around the world.
- ◆ Large amounts of food waste, yard waste, and other organic matter that is generated by households, restaurants, and other institutions.
- ◆ The main issue with wet garbage is that, it decomposes quickly, leading to unpleasant odors, attracting pests and vermin, and causes health hazards.
- ◆ Disposal of Wet garbage is an expensive process and also environmentally damaging, as it can spill on roads during transportation to dumping grounds.
- ◆ The challenge therefore is to find an effective and sustainable solution to manage Wet Garbage.

HY-PURE introduces new and revolutionary Wet Garbage Processing Unit

Advantages of HY-PURE Machine:

- ◆ Our innovation will reduce burden on big commercial establishments such as societies, MNC's, Hotel's, marriage halls, canteens and similar bulk establishments where daily Wet Garbage management is a challenge.
- ◆ The waste by-product from this unit can be used after filtration for composting, organic fertilizer and to generate biogas.
- ◆ In this processing unit the food waste particle size becomes superfine below 5mm to 7mm which can directly be connected to sewage without causing blockages in the existing system.
- ◆ Keeps the place clean & free from insects, rodents, cockroaches, ants etc.
- ◆ Free from bad odour
- ◆ Instant disposal of kitchen waste will reduce the load on government's Wet garbage collecting agencies
